Questions:
Q: From how far away can yellowjackets sense a sweet trap?
A: Answered live: https://youtu.be/5-Z3t5f6X80?t=1565 A quick look at the literature suggests that yellowjackets in the northeast forage within one mile of the nest.

Q: What about bees - how do we NOT get them into the yummy stuff?
A: Anecdotally, when our program tested dozens of yellowjacket traps over several years, we did not catch bees (honeybees or other). In fact, one trap was located near a honey bee hive and did not catch a single honey bee. For details on our stinging insect trapping projects, see the following:
