

Trouble-makers

Helpers

Slugs

Slugs scrape large holes in plants with their mouths, which are like a file or a rasp.

Snails

Snails make a slimy trail. Slime helps them move smoothly over the ground.

Trouble-makers

Helpers

Ladybugs

Lacewing and Ladybug larvae are ferocious predators. Don't mistake them for pests.

HELPERS

Lacewings and ladybugs eat many pest such as aphids.

TROUBLEMAKERS

Slugs and snails chew leaves and destroy seedlings

Aphids and Japanese beetles eat plants. Some pests do this when they are larvae, while others are adults.

HELPERS

Both live in the soil. They eat dead plants and animals, bringing those nutrients to the soil. This makes the soil richer.

Ground Beetles

Ground Beetles eat slugs, snails, gypsy moths, and many other pests. Centipedes are speedy.

Centipedes

Lacewings

How to make your Helper and Trouble Maker Grabber

1. Fold these two corners together and crease firmly.

2. Unfold.

3. Then fold the other two corners together and crease firmly.

4. Fold each corner point into the center like this.

Your paper should be square now.

Some bugs are Helpers and some bugs are Trouble Makers. Learn how to tell the difference between them and learn what their jobs are.

5. Flip the square over. Then fold all four of the corners into the center.

9. Press the points together. Grab a friend and get ready to play!
